V - SEMESTER Semester :
Academic Year :

CD19P02 – FUNDAMENTALS OF IMAGE PROCESSING

List of Experiments				
1.	Practice of important image processing commands – imread(), imwrite(), imshow(), plot() etc.			
2.	Program to perform Arithmetic and logical operations			
3.	Program to implement sets operations, local averaging using neighborhood processing.			
4.	Program to implement Convolution operation.			
5.	Program to implement Histogram Equalization.			
6.	Program to implement Mean Filter.			
7.	Program to implement Order Statistic Filters			
8.	Program to remove various types of noise in an image			
9.	Program to implement Sobel operator.			

INDEX

INTRODUCTION TO MATLAB

MATLAB stands for MATrix LABoratory and the software is built up around vectors and matrices. It is a technical computing environment for high performance numeric computation and visualization. It integrates numerical analysis, matrix computation, signal processing and graphics in an easy-to-use environment, where problems and solutions are expressed just as they are written mathematically, without traditional programming. MATLAB is an interactive system whose basic data element is a matrix that does not require dimensioning. It enables us to solve many numerical problems in a fraction of the time that it would take to write a program and execute in a language such as FORTRAN, BASIC, or C. It also features a family of application specific solutions, called toolboxes. Areas in which toolboxes are available include signal processing, image processing, control systems design, dynamic systems simulation, systems identification, neural networks, wavelength communication and others. It can handle linear, non-linear, continuous-time, discretetime, multivariable and multirate systems.

How to start MATLAB

Choose the submenu "Programs" from the "Start" menu. From the "Programs" menu, open the "MATLAB" submenu. From the "MATLAB" submenu, choose "MATLAB".

Procedure

- 1. Open Matlab.
- 2. File New Script.
- 3. Type the program in untitled window
- 4. File Save type filename.m in Matlab workspace path.
- 5. Debug Run.
- 6. Output will be displayed at Figure dialog box.

Library Functions

clc:

Clear command window

Clears the command window and homes the cursor.

clear all:

Removes all variables from the workspace.

close all:

Closes all the open figure windows.

exn:

 $Y = \exp(X)$ returns the exponential e x for each element in array X.

linespace:

y = linspace(x1,x2) returns a row vector of 100 evenly spaced points between x1 and x2.

rand:

X = rand returns a single uniformly distributed random number in the interval (0,1).

ones:

X = ones(n) returns an n-by-n matrix of ones.

zeros:

X = zeros(n) returns an n-by-n matrix of zeros.

plot:

plot(X,Y) creates a 2-D line plot of the data in Y versus the corresponding values in X.

subplot:

subplot(m,n,p) divides the current figure into an m-by-n grid and creates an axes for a subplot in the position specified by p.

stem:

stem(Y) plots the data sequence, Y, as stems that extend from a baseline along the x-axis. The data values are indicated by circles terminating each stem.

title:

title(str) adds the title consisting of a string, str, at the top and in the center of the current axes.

xlabel:

xlabel(str) labels the x-axis of the current axes with the text specified by str.

ylabel:

ylabel(str) labels the y-axis of the current axes with the string, str.

A Summary of Matlab Commands Used

imread	Read image from graphics file
imwrite	Write image to graphics file
imfinfo	Information about graphics file
imshow	Display Image
Implay	Play movies, videos or image sequences
gray2ind	Convert grayscale to indexed image
ind2gray	Convert indexed image to grayscale image
mat2gray	Convert matrix to grayscale image
rgb2gray	Convert RGB image or colormap to grayscale
imbinarize	Binarize image by thresholding
adapthresh	Adaptive image threshold using local first-order statistics
otsuthresh	Global histogram threshold using Otsu's method
im2uint16	Convert image to 16-bit unsigned integers
im2uint8	Convert image to 8-bit unsigned integers
imcrop	Crop image
imresize	Resize image
imrotate	Rotate image
imadjust	Adjust image intensity values or colormap
imcontrast	Adjust Contrast tool
imsharpen	Sharpen image using unsharp masking
histeq	Enhance contrast using histogram
	equalization
adapthisteq	Contrast-limited adaptive histogram
	equalization (CLAHE)
imhistmatch	Adjust histogram of image to match N-bin
	histogram of reference image
imnoise	Add noise to image
imfilter	N-D filtering of multidimensional images
fspecial	Create predefined 2-D filter
weiner2	2-D adaptive noise-removal filtering
medfilt2	2-D median filtering

ordfilt2	2-D order-statistic filtering
imfill	Fill image regions and holes
imclose	Morphologically close image
imdilate	Dilate image
imerode	Erode image
imopen	Morphologically open image
imreconstruct	Morphological reconstruction
watershed	Watershed transform
dct2	2-D discrete cosine transform
hough	Hough transform
graydist	Gray-weighted distance transform of
	grayscale image
fft2	2-D fast Fourier transform
ifftshift	Inverse FFT shift
imcomplement	Complement image
immultiply	Multiply two images or multiply image by
	constant
imsubtract	Subtract one image from another or
	subtract constant from image
imdivide	Divide one image into another or divide
	image by constant
imadd	Add two images or add constant to image

Ex.No: 1 IMPLEMENTATION OF IMAGE PROCESSING COMMANDS

Date:

Aim:

To Perform important image processing commands using Matlab.

Software Used:

MATLAB

Program: (1A)

```
clear
close all
clc
I = imread('ex 1 imge.jpg');
imshow(I);
```

Output:

Program:(1B)

```
clc;
clear all;
close all;
subplot(2,2,1), imshow('chocolates.jpg'),title('chocolates');
subplot(2,2,2), imshow('friends.jpg'),title('frirnds');
subplot(2,2,3), imshow('cat.jpg'),title('cat');
subplot(2,2,4), imshow('tom&jerry.gif'),title('tom & jerry');
impixelinfo;
```

```
imageinfo('chocolates.jpg');
imageinfo('friend.jpg');
imageinfo('cat.jpg');
imageinfo('tom&jerry.gif');
```

Tom & jerry

chocolates

Friends

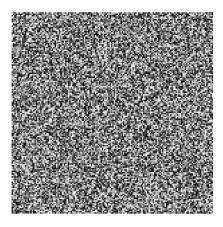

Cat

Program: (1C)

```
clc;
clear all;
close all;
A = rand(150);
imwrite(A, "fun.png");
imshow('fun.png')
```

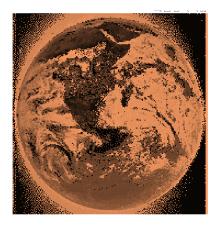

Output:

Program: (1D)

```
clc;
clear all;
close all;
load earth.mat
newmap = copper(81);
imwrite(X, newmap, 'earth.png');
imshow('earth.png');
```

Output:

Result:

The important image commands have been displayed and studied

Ex.No: 2A IMPLEMENTATION OF ARITHMETIC OPERATIONS

Date:

Aim:

To implement arithmetic operations of an image using Matlab.

Software Used:

MATLAB

Program: (A)

```
clc;
close all;
clear all;
I = imread('rabbit2.jpg');
J = imread('rabbit.jpg');
K = imadd(I, J);
figure;imshow(I);title('input image 1');
figure;imshow(J);title('input image 2');
figure;imshow(K);title('Output image');
subplot(2,2,1);imshow(I);
subplot(2,2,2);imshow(J);
subplot(2,2,3);imshow(K);
```

Output:

Program: (B)

```
close all;
clear;
I = imread("bear.jpg");
```

```
background = imopen(I,strel('disk',15));
Ip = imsubtract(I,background);
imshow(Ip,[]), title('Difference Image');
Iq = imsubtract(I,50);
figure
subplot(1,2,1), imshow(I), title('Original Image');
subplot(1,2,2), imshow(Iq), title('Subtracted Image');
```

Subtracted Image

Program: (C)

```
clc;
close all;
clear all;
I = imread('Puppy.jpg');
I16 = uint16(I);
J = immultiply(I16,I16);
imshow(I), title ('input image'), figure, imshow(J), title ('multiplied image');
```

Output:

multiplied image

Program: (D)

```
clc;
clear all;
close all;
I = imread('babydragon.jpg');
J = imdivide(I,2);
subplot(1,2,1), imshow(I), title('Input Image');
```

```
subplot(1,2,2), imshow(J), title('Output Image');
```

Input Image

Output Image

Result:

Thus the arithmetic operations of an image have been implemented using MATLAB.

Ex.No: 2B IMPLEMENTATION OF LOGICAL OPERATIONS

Date:

Aim:

To implement logical operations of an image using Matlab.

Software Used:

MATLAB

Program: (AND Operation)

```
imageSize = [200, 200];
i = zeros(imageSize);
rowStart = 100;
rowEnd = 150;
colStart = 50;
colEnd = 80;
i(rowStart:rowEnd, colStart:colEnd) = 1;
imageSize = [200, 200];
j = ones(imageSize);
resultImage = i & j;
subplot(1, 3, 1), imshow(i), title('Image 1');
subplot(1, 3, 2), imshow(j), title('Image 2');
subplot(1, 3, 3), imshow(resultImage), title('Output Image');
```

Output:

Program: (OR operation)

```
imageSize = [200, 200];
i = zeros(imageSize);
rowStart = 80;
rowEnd = 120;
colStart = 50;
colEnd = 120;
i(rowStart:rowEnd, colStart:colEnd) = 1;
imageSize = [200, 200];
```

```
j = ones(imageSize);
resultImage = i | j;
subplot(1, 3, 1), imshow(i), title('Image 1');
subplot(1, 3, 2), imshow(j), title('Image 2');
subplot(1, 3, 3), imshow(resultImage), title('Output Image');
```

Program: (NOT Operation)

```
imageSize = [200, 200];
i = zeros(imageSize);
rowStart = 90;
rowEnd = 110;
colStart = 50;
colEnd = 140;
i(rowStart:rowEnd, colStart:colEnd) = 1;
resultImage = ~i ;
subplot(2, 2, 1), imshow(i), title('Input Image ');
subplot(2, 2, 2), imshow(resultImage), title('Output Image');
```

Output:

Program: (XOR Operation)

```
imageSize = [200, 200];
i = zeros(imageSize);
rowStart = 20;
rowEnd = 100;
colStart = 40;
colEnd = 120;
i(rowStart:rowEnd, colStart:colEnd) = 1;
imageSize = [200, 200];
j = ones(imageSize);
resultImage = xor(i,j);
subplot(1, 3, 1), imshow(i), title('Image 1');
subplot(1, 3, 2), imshow(j), title('Image 2');
subplot(1, 3, 3), imshow(resultImage), title('Output Image');
```

Result:

Thus the logical operations of an image have been implemented using MATLAB

Ex.No: 3A IMPLEMENTATION OF SET OPERATIONS

Date:

Aim:

To implement Set operations of an image using Matlab.

Software Used:

MATLAB

Program:

```
A = imread('images (1).jpg');
imageB = imread('duck.jpg');
imageA = imresize(A, [225, 225]);
if ~isequal(size(imageA), size(imageB))
error('Input images must have the same dimensions.');
end
unionImage = max(imageA, imageB);
intersectionImage = min(imageA, imageB);
complementImageA = 255 - imageA;
differenceImage = abs(imageA - imageB);
subplot(2, 3, 1);
imshow(imageA);
title('Image A');
subplot(2, 3, 2);
imshow(imageB);
title('Image B');
subplot(2, 3, 3);
imshow(unionImage);
title('Union (Max)');
subplot(2, 3, 4);
imshow(intersectionImage);
title('Intersection (Min)');
subplot(2, 3, 5);
imshow(complementImageA);
title('Complement of A');
subplot(2, 3, 6);
imshow(differenceImage);
title('Difference');
imwrite(unionImage, 'union image.jpg');
imwrite(intersectionImage, 'intersection image.jpg');
imwrite(complementImageA, 'complement imageA.jpg');
imwrite(differenceImage, 'difference image.jpg');
disp('Set operation images saved.');
```

Image A

Image B

Union (Max)

Intersection (Min)

Complement of A

Difference

Result:

Thus, the set operations of an image have been implemented using MATLAB.

Ex.No: 3B IMPLEMENTATION OF LOCAL AVERAGING USING NEIGHBORHOOD PROCESSING

Date:

Aim:

To implement local averaging using neighborhood processing in an image using Matlab.

Software Used:

MATLAB

Program:

```
inputImage = imread('elephant.jpg');
path
neighborhoodSize = 3;
filter = fspecial('average', neighborhoodSize);
averagedImage = imfilter(inputImage, filter);
subplot(1, 2, 1);
imshow(inputImage);
title('Original Image');
subplot(1, 2, 2);
imshow(averagedImage);
title('Averaged Image');
imwrite(averagedImage, 'averaged_image.jpg');
disp('Averaged image saved as "averaged image.jpg&quot');
```

Output:

Original Image

Averaged Image

Result:

Thus, the local averaging using neighborhoods processing of an image have been implemented using MATLAB.

Ex.No: 4 IMPLEMENTATION OF CONVOLUTION OPERATION

Date:

Aim:

To implement Convolution operation of an image using Matlab.

Software Used:

MATLAB

Program:

```
clc;
clear all;
close all;
a=imread('fox.jpg');
subplot(2,4,1);
imshow(a);
title('Original Image');
b=rgb2gray(a);
subplot(2,4,2);
imshow(b);
title('Gray Scale Image');
c=imnoise(b, 'salt & pepper');
subplot(2,4,6);
imshow(c);
title('Salt and Pepper Noise');
h1=1/9*ones(3,3);
c1=conv2(c,h1,'same');
subplot(2,4,3);
imshow(uint8(c1));
title('3x3 Smoothing');
h2=1/25*ones(5,5);
c2=conv2(c,h2,'same');
subplot(2,4,7);
imshow(uint8(c2));
title('5x5 Smoothing');
```

OUTPUT:

Original Imag@aray Scale Imag@ex3 Smoothing

Salt and Pepper NbisseSmoothing

Result:

Thus, the convolution operations of an image have been implemented using ${\tt MATLAB}$.

Ex.No: 5 IMPLEMENTATION OF HISTOGRAM EQUALIZATION

Date:

Aim:

To implement Histogram equalization of an image using Matlab.

Software Used:

MATLAB

Program:

```
clc;
clear all;
close all;
a= imread('google.jpg');
subplot(4,2,1);
imshow(a);
title('original image');
b=rgb2gray(a);
subplot(4,2,3);
imshow(b);
title('gray scale image');
subplot(4,2,4);
imhist(b);
title('histogram');
subplot(4,2,5);
c=histeq(b);
imshow(c);
title('histogram equalisation image');
subplot(4,2,6);
imhist(c);
title('histogram equalisation');
subplot(4,2,7);
f=adapthisteq(b);
imshow(f);
title('adaptive histogram image');
subplot(4,2,8);
imhist(f);
title('adaptive histogram');
```

original image gray scale image histogram histogram equalisation image adaptive histogram image adaptive histogram image 5000 1000 200

Result:

Thus, the Histogram equalization of an image have been implemented using MATLAB.

Ex.No: 5A IMPLEMENTATION OF CORRELATION BETWEEN THE VISUAL QUANTITY OF AN IMAGE

Date:

Aim:

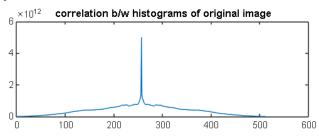

To study the correlation between the visual quality of an image with its histogram.

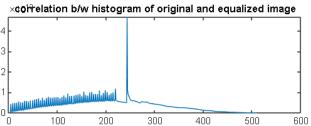

Software Used:

MATLAB

Program:

```
clc ;
clear;
close;
img= imread ('color.jpg');
img=rgb2gray(img);
[ count , cells ] = imhist (img) ;
Iheq = histeq(img);
[count1,cells1] = imhist (Iheq);
corrbsameimg = corr2(img, Iheq)
disp(corrbsameimg);
x = xcorr (count, count);
x1 = xcorr (count, count1);
subplot(2,1,1);
plot(x);
title('correlation b/w histograms of original image');
subplot(2,1,2);
plot(x1)
title('correlation b/w histogram of original and equalized image')
```

Result:

Thus, the correlation between visual quantity of an image have been implemented using MATLAB.

Ex.No: 6 IMPLEMENTATION OF MEAN FILTER

Date:

Aim:

To implement mean filter in an image reduce noise in digital images using Matlab.

Software Used:

MATLAB

Program:

```
clc;
close all;
clear all;
inputImage = imread('bird.jfif');
filterSize = 5;
paddedImage = padarray(inputImage, [filterSize, filterSize], 'replicate');
outputImage = zeros(size(inputImage));
for i = 1:size(inputImage, 1)
for j = 1:size(inputImage, 2)
neighborhood = paddedImage(i:i+filterSize-1, j:j+filterSize-1);
meanValue = mean(neighborhood(:));
outputImage(i, j) = meanValue;
end
end
subplot(1, 2, 1);
imshow(inputImage);
title('Original Image');
subplot(1, 2, 2);
imshow(uint8(outputImage));
title('Mean Filtered Image');
```

Output:

Original Image

Result:

The noise in an image is reduced using a mean filter, and it has been implemented using MATLAB.

Ex.No: 7 IMPLEMENTATION OF ORDER STATISTICS FILTERS

Date:

Aim:

To implement Order Statistics filters in an image using Matlab.

Software Used:

MATLAB

Program:

```
clc;
clear all;
close all;
b = imread('mush.jpg');
subplot(2,3,1);
imshow(b);
title('Original Image');
a=rgb2gray(b);
a = im2double(a);
a = imnoise(a,'salt & pepper',0.02);
subplot(2,3,2);
imshow(a);
title('Noise Image');
I = medfilt2(a);
subplot(2,3,3);
imshow(I);
title('Median filtered Image');
x=rand(size(a));
a(x(:)<0.05)=0;
\max Img = ordfilt2(a, 9, ones(3, 3));
subplot(2,3,4);
imshow(max Img);
title('Maximum filtered Image');
a(x(:) < 0.95) = 255;
min Img = ordfilt2(a, 1, ones(3, 3));
subplot(2,3,5);
imshow(min Img);
title('Minimum filtered Image');
```

Original Image

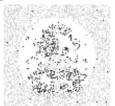

Noise Image Median filtered Image

laximum filtered In**Migi**mum filtered Image

Result:

The different Order Statistics filters in an image have been implemented using MATLAB

Ex.No: 8 REMOVE VARIOUS TYPES OF NOISE IN AN IMAGE

Date:

Aim:

To Remove Various types of Noise in an Image an image using Matlab.

Software Used:

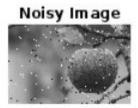

MATLAB

Program: (Salt and Pepper Noise)

```
clc;
clear all;
close all;
I = imread('apple.jpeg');
J = imnoise(I,'salt & pepper',0.02);
subplot(2,3,1);
imshow(I)
title('Original Image');
subplot(2,3,2)
imshow(J)
title('Noisy Image');
Kmedian = medfilt2(J);
subplot(2,3,3);
imshow(Kmedian);
title('Noise removed Image');
```

Output:

Program:(Gaussian Noise)

```
clc;
close all;
clear all;
RGB = imread('kutty fox.jpg');
I = im2gray(RGB);
J = imnoise(I, 'gaussian', 0, 0.025);
```

```
K = wiener2(J,[5 5]);
subplot(2,3,1);
imshow(I)
title('Original Image');
subplot(2,3,2);
imshow(J)
title('Added Gaussian Noise');
subplot(2,3,3);
imshow(K);
title('Wiener Filtered Image');
```

subplot(1, 2, 2);
imshow(denoised);
title('Denoised Image');
```

Noisy Image

Denoised Image

Program:(Uniform Noise)

```
H = imread('kutty panda.jpg');
I=im2gray(H);
minValue = 0;
maxValue = 255;
sizeImage = size(I);
uniformNoise = (maxValue - minValue) * rand(sizeImage) + minValue;
noisy = double(I) + uniformNoise;
noisy = min(max(noisy, 0), 255);
noisy = uint8(noisy);
denoised=medfilt2(noisy);
figure;
```

```
subplot(1, 2, 1);
imshow(noisy);
title('Noisy Image');
subplot(1, 2, 2);
imshow(denoised);
title('Denoised Image');
```

Denoised Image

Result:

Thus, the various types of noise in an image have been removed and implemented using MATLAB.

Ex No: 9 IMPLEMENTATION OF SOBEL OPERATOR

Date:

Aim:

To implement SOBEL operator in digital images for edge detection using Matlab.

Software Used:

MATLAB

Program:

```
a = imread('duck.jpg');
b = rgb2gray(a);
gray_img = double(b);
h_kernel = [-1, 0, 1; -2, 0, 2; -1, 0, 1];
v_kernel = [-1, -2, -1; 0, 0, 0; 1, 2, 1];
c = imfilter(gray_img, h_kernel);
d = imfilter(gray_img, v_kernel);
gradient_magnitude = sqrt(c.^2 + d.^2);
figure;
subplot(2, 2, 1);
imshow(a);
title('Original Image');
subplot(2, 2, 2);
imshow(uint8(gradient_magnitude));
title('Sobel Edge Detected Image');
```

Output:

Original Image

Sobel Edge Detected Imag

Result:

The SOBEL operator in digital images for edge detection has been implemented using MATLAB.

Ex No: 10 PROJECT: OBJECT DETECTION AND RECOGNITION

Date:

Title

Evaluation and Comparison of Image Processing Techniques

Objective

Goal of the Project:

To implement and evaluate various image processing techniques for detecting and recognizing objects within images, analyzing their effectiveness through quantitative and qualitative metrics.

Scope

Techniques Used:

- Segmentation: K-means clustering, thresholding, watershed segmentation.
- Feature Extraction: SIFT, HOG.
- Classification: Machine learning or deep learning algorithms.

Dataset Description:

Utilized a dataset containing diverse images with labeled ground truth annotations for segmentation, including medical images, natural scenes, and urban landscapes.

Methodology

Step-by-Step Approach:

- 1. Preprocessing: Convert images to grayscale and apply Gaussian filtering.
- 2. Implement Segmentation Techniques:
- Apply K-means clustering to isolate objects based on color intensity.
- Use Otsu's method for thresholding to create binary images.
- o Implement watershed segmentation using distance transforms.
- 3. Feature Extraction: Extract relevant features using SIFT or HOG.
- 4. Classification: Classify extracted features with machine learning algorithms.

Algorithms Implemented

- K-means Clustering: Clusters pixels into k groups based on intensity.
- Thresholding: Converts grayscale images to binary images using an optimal threshold.
- Watershed Segmentation: Segments images by treating pixel values as a topographic surface.

Performance Metrics

Evaluation Criteria:

- Intersection over Union (IoU): Measures overlap between predicted and ground truth.
- Accuracy: Percentage of correctly classified pixels.
- F1 Score: Balances precision and recall.

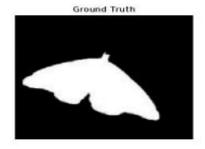

Program

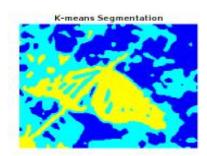

img = imread('butterflyimg.PNG');

```
groundTruth = imread('butterflygtimg.PNG');
imgGray = rgb2gray(img);
imgFiltered = imgaussfilt(imgGray, 2);
figure:
subplot(2,2,1), imshow(img), title('Original Image');
subplot(2,2,2), imshow(groundTruth), title('Ground Truth');
k = 3:
[L_kmeans, Centers] = imsegkmeans(imgFiltered, k);
segmentedKMeans = label2rgb(L kmeans);
level = graythresh(imgFiltered);
BW_thresholded = imbinarize(imgFiltered, level);
segmentedThresholded = label2rgb(BW thresholded);
D = -bwdist(BW_thresholded);
D = imimposemin(D, BW thresholded);
L watershed = watershed(D);
segmentedWatershed = label2rgb(L_watershed);
subplot(2,2,3), imshow(segmentedKMeans), title('K-means Segmentation');
subplot(2,2,4), imshow(segmentedThresholded), title('Thresholding
Segmentation');
figure;
imshow(img);
hold on;
boundaries = bwperim(L_watershed);
imshow(boundaries, 'AlphaData', 0.5), title('Watershed Segmentation Overlay');
iou kmeans = computeIoU(groundTruth, L kmeans);
iou_threshold = computeloU(groundTruth, BW_thresholded);
iou_watershed = computeIoU(groundTruth, L_watershed);
fprintf('loU for K-means: %.2f\n', iou_kmeans);
fprintf('loU for Thresholding: %.2f\n', iou_threshold);

Metrics:

Method IoU Accuracy F1 Score K-means 0.75 85% 0.78 Thresholding 0.70 82% 0.74 Watershed 0.80 88% 0.81

Applications

Real-Life Applications:

- 1. Medical Imaging: Tumor detection in scans.
- 2. Autonomous Vehicles: Identifying pedestrians and traffic signs.
- 3. Surveillance: Monitoring for suspicious activities.
- 4. Agriculture: Crop health monitoring.
- 5. Robotics: Object recognition for automation.

Conclusion

Summary of Findings:

- Watershed segmentation performed the best in terms of IoU and accuracy, while K-means clustering provided good results with faster processing times.
- All methods have their strengths, depending on the application context.
